Industry 4.0 – Publishing house Maggioli Editor

When we talk about “Industry 4.0” we refer to a business production / management model whose characteristic elements consist of the “connection between physical and digital systems, complex analyses through big data and real-time adaptations”. A process that will lead to “fully automated and interconnected industrial production”, as we read in the preface of the text published by Maggioli, but in which the centrality of the individual is bolstered thanks to his ability to face and resolve the ever-changing transformations of companies which are increasingly flexible and responsive to the relevant market …
